CAR RENTAL SYSTEM

CSE326 PROJECT

REPORT

Submitted by:

Ishita(12214999)

Deeya Joshi(12215708)

ACKNOWLEDGEMENT

I would like to express my sincere thanks of gratitude to my teacher Ms. Navjot Kaur, for his valuable guidance and support in completing my project.

I would also like to express my gratitude towards our Chancellor and Vice-chancellor, for providing me with all the facility that was required and I am also thankful to my classmates who helped a lot in completing my project.

INTRODUCTION

We develop this project to book a car on rent at the fare charges. In the present system all booking work is done

manually and it takes very hard work to maintain the information about booking and cars. If you want to find which vehicle is available for booking then it takes a lot of time. It

only makes the process more difficult. The project aim to automate the work performed in the car rental management system like generating daily bookings, records of cars or cabs

available for booking, records of routes available, rental charges for cars for every route, and storing records of the customer.

A car rental management system is a car booking software that provides a complete solution to all your day-to-day car booking office running needs. The cab rental management system is a unique and innovative product.

This system gives the following features to the customers:-

- **Registration-In this system, users have to become registered user to rent a car. User have to fill their contact information like their name, address, and mobile number in the registration form. After submitting the form, he gets a username and password to login to the system.**
- **Date Scheduling: The user can select the date of car booking, To book a car on the selected date, he has to give pickup place information and drop-off place information.**

HARDWARE REQUIREMENTS

- Processor: Core i3 or higher/AMD processor.
- Hard disk: 50GB or higher (Recommended)
- RAM: 4GB or Higher (Recommended)
- OS: Windows 7 or Higher(Recommended)

Why Rent.al?

This project is designed so as to be used by Car Rental Company specializing in renting cars to customers. It is an online system through which customers can view available cars, register, view profile and book car. The advancement in Information Technology has greatly enhanced various business processes and communication between companies (service providers) and their customers of which car rental industry is not left out.

Invest in a powerful Car Rental Software and Website solution that suits your business model perfectly. Digitalize your business, sell online, automate operations, manage your fleet more efficiently and increase profits.

This is the demo website for the project coded by © Deeyu Joshi(12215708) & Ishita(12214999)

20 Thousands/day,
Ludhiana, Punjab

CONCLUSION

Car rental business has emerged with a new goodies compared to the past experience where every activity concerning car rental business is limited to a physical location only. Even though the physical location has not been totally eradicated; the nature of functions and how these functions are achieved has been reshaped by the power of internet. Nowadays, customers can reserve cars online, rent car online, and have the car brought to their door step once the customer is a registered member or go to the office to pick the car. The web based car rental system has offered an advantage to both customers as well as Car Rental Company to efficiently and effectively manage the business and satisfies customer's need at the click of a button.
